**IMPORTANT SAFETY INFORMATION**

Allergenic extracts are indicated for skin test diagnosis and treatment (immunotherapy) of patients with seasonal and perennial allergies. Do not inject intravenously. **Allergenic extracts may cause severe life-threatening systemic reactions, including the rare occurrence of anaphylaxis or death.** Systemic reactions include generalized skin erythema, urticaria, pruritis, angioedema, rhinitis, wheezing, laryngeal edema and hypotension. Intended for use only by physicians experienced in the administration of allergenic extracts. Initial dose must be based on skin test. Observe patients in the office for at least 30 minutes following treatment. Emergency measures and personnel trained in their use must be available immediately in the event of a life-threatening reaction. Immunotherapy may not be suitable for patients with medical conditions that reduce their ability to survive a systemic reaction.
